

# #1 Cloud-Native Patch Management

For Work-From-Anywhere Workplaces

Ensure the security of your remote operations, improve the productivity of your IT team and provide the best support to your end users with the all-in-one solution for patch management, remote monitoring and management, and remote access.

## Patch management

Automate the entire patch management process across remote, hybrid and onsite endpoints, from identifying missing updates to compliance reporting.

## Remote Access

Slash troubleshooting time and offer both end users high-quality IT support from anywhere in the world, and without investing in additional software.

## RMM

Boost efficiency by automating routine IT management tasks across all endpoints. Stay on top of endpoint issues and resolve them quickly.

“With our previous tool, we were under constant risk, as 20% of our network was not being patched with security updates because they were off-site or not joined to our company domain. Action1 addresses this security gap by enabling us to establish a robust patch management program that covers 100% of our devices.”

Joe Holder, IT Director at The Arthur Companies

#1 Cloud-Native Patch Management  
For Work-From-Anywhere Workplaces

# Key Features of Action1

## Why Action1?

### Patch management

Update operating systems and third-party applications from a single console consistently across all your endpoints.

### Software deployment

Deploy and remove applications ad-hoc or en masse. Choose apps from the built-in App Store or add your custom apps.

### Cloud-native platform

Update and manage remote and onsite endpoints with no company network, domain, or VPN required.

### Fast time-to-value

Get up and running and start getting value in one hour. No legacy tools, clunky integrations and feature overload.

### Secure remote access

Support users and maintain servers from anywhere in the world without RDP and VPN and opening an inbound port.

### Endpoint management

Run PowerShell and CMD scripts across multiple computers. Pick from the library of pre-built scripts or add your custom ones.

### P2P distribution

Deliver software and updates faster while ensuring network availability for critical applications.

### IT asset inventory

Get a real-time inventory of software and hardware assets. Stay on top of hardware and software changes with alerts.

### Real-time reporting

Keep tabs on installed and missing updates, antivirus status and more, with on-demand and scheduled reports and alerts.

### Straightforward pricing

Get your first 100 endpoints for free. Scale up at a simple all-inclusive rate. No hidden fees or nickel-and-diming.
